Discrete workflow optimization

Frozen contract

Split and target
Checkpoint and objective
Operator set and budget
Immutable hashes

MedTAWS

UCB-style parent draw
One workflow modification
Fail-closed execution
Receipt and tree update

Workflow ablation

MedTAWS
Score-softmax
Greedy
Uniform

Frozen workflow

Prompt schedule
Mask recurrence
Aggregation
Execution order

Continuous prompt-sensitive weight adaptation

Trajectory group

Same 3D volume
K corrective-click seeds
Threshold masks
Geometry-aware rewards

Relative alignment

Within-case advantages
Bernoulli mask log-prob
Reference KL
Dice-CE anchor

Frozen checkpoint

Prompt encoder adapted
Mask decoder adapted
Image encoder frozen
Provenance committed

Final evaluation requires base / MedTAWS / GRPO-style / combined arms under one frozen protocol
